Disclaimer: This application is not approved or related to Mojang AB, its name, trade mark and other aspects of the application are registered trademarks and property of their owners. This is an unofficial Minecraft app. Don't buy this app it's a waste of money I thought it was an app with minecraft mods, but it's just a piece of junk with no mods so if you want some just go to this app called MCPeaddons it's free and it's not a scam not buy it look at the reviews before buying somethig like I tried it online it was a mod and I was so excited because it was the same front app logo so I bought it for one dollar down drain I could look for IDs online..... One star It cost 3.00 and didn't do anything, but bullshit. All my life I've been trying to get through one hack, but no I have to spend my time in Minecraft on a noob on my iPad.👎👎👎👎👎It's a rip-off of useless information. Developer Saliha Bhutta has not provided Apple with details about its privacy practices and data handling. The developer must provide privacy details when it submits an update to its next app. Toolbox (previously too many points) is the ultimate solution for quickly accessing all kinds of blocks and items and changing settings in the game (eg weather, gamemode and more). The latest update includes a optional launcher. Launcher can be used for loading texture packs, X-ray, armor status and other unique features of Minecraft Pocket Edition. Creator: MCMrArm, Twitter Account Updated: 27 October, 2016 (0.16 support) Features Launcher (optional): Load texture packs, change GUI scale Access to all existing items & blocks WorldEdit Recipe tool (see recipe for all items and blocks) Enchanting system themes switch between creative/survival, Overworld / Nether, flying Kill, heal, set health (1-100 HP), restore Hunger Set spawn position and teleport there Set time of day, turn off time, disable ticking weather (no rain / rain / lots of rain) Potion effect: remove all, add Remove items stock Items: spawn, kill, set health Show / M hide teleportation system screens slide slider (experience) Mininap How to load machine? Normal game manager (M) work with both BlockLauncher and Toolbox Launcher. (Some features such as an X-ray and a fruit capiator require a launcher.) It's up to you to decide what to use. Importing Modbox Toolbox can .js scripts and .modpkg packages. After you've loaded the app in the toolbox, press Launcher options. Then modpes and press + button in the lower-right corner of the screen. Use the file manager to find the mod you want, and then press back the button. The toolbox should now be closed while it is still open, then close it and reopen it. Importing Texture Packs Press Launcher Options to open the interface for full settings and texture packs. You must open Minecraft using the Toolbox launcher app for this work. You will find many different texture packs to choose from here for our share of texture packs. To load the texture package, press import and import the .zip file. Then length tap the texture pack and drag it to The Enabled Texture Packs. To disable the texture package, tap it again and drag it to the Available Texture Packages column. How do I use Toolbox game? Tap the M button on the top left to open the graphical user interface (GUI) where you can access all new features. It is also possible to tap the three-point icon that is shown in the image below. Here you can access all the items and blocks in the game. Scroll to find them in the list, or use the search box to filter the results. If you choose an element or block with a craft recipe, you can view the recipe by clicking on the craft table. Tap the chest icon to get an overview of your inventory and armor slots. Select Charm, and then tap the item you want to charm. A pop-up menu appears on the screen and allows you to select the charms you want for the item. The following options are probably the most useful: Some of the main features include the transition between creativity and survival, setting your dimensions (Overworld/Nether) and controlling time and weather. To see the complete list of options, go ahead, and see the list of features. The teleportation system is very easy to use and offers a unique GUI with screenshot of each location of teleportation. Tap the location where you want to teleport. Launcher features The following features only work when you use the toolbox launcher application. So instead of loading Minecraft PE with BlockLauncher you should open the Toolbox app. Use toolbox settings to enable X-rays. To turn on X-ray vision, use the X-ray button in the lower-right corner of the screen. This is a great way to quickly find some valuable ores in your world. Turn the tree capiator option more realistically to cut down the tree. Use an axe to break the tree's bottom block and the rest of the tree will be destroyed (including leaves). Allow armor status to display the durability of your armor with a clean interface under your health bar. The debug information option allows you to enable something similar with debugging information (F3) functionality in the PC version of Minecraft. It displays information such as FPS, difficulty level, coordinates, and information about your device. WorldEdit Type /help [1-26] (e.g. /help 5) to view a complete list of available text commands. WorldEdit Wiki Page Minecraft Block IDs An important item mod is a wand (/ wand). To select the first location, tap (long) the place on the ground with the wand. Then (short) tap with a wand to select a different position. In this case, I chose an area of 2x5 blocks using a wand and then printed // walls 1 (1 = stone, see more Minecraft ID here) to create a wall stone. Install Guide This is an Android app / BlockLauncher addon that works only on Android devices! Since this is an addon mod BlockLauncher installation process looks a little different. But don't worry, it's very simple! You can also download it directly from Google Play. Download .Apk Use .apk ES File Explorer (or another file manager application) to find the file you've downloaded. Tap the file to install it (BlockLauncher needs to successfully install the addon). When you have finished the installation, it is complete and you can to use the toolbox. Or, if you want to use the toolbox launcher, you should open the toolbox app instead. IMPORTANT 0.16 USAGE NOTE: 0.16 You need to load the Minecraft toolbox using the app to access all features. Download (Google Play) Download (.APK, version Archives) Archive) Archives
